Anushreya – Resume

Business Analyst | E-commerce Operations, Returns & Fraud Analytics | Process Automation

ssanushreya@gmail.com · +91 9106240196 · linkedin.com/in/anushreya1306 · Open to Bengaluru

Professional Summary

Business analyst with 2+ years at AJIO (Reliance Retail), owning return KPI analytics (RTO/RVP) for a large fashion e-commerce platform. I turn operational data into driver-level root cause analysis (RCA), quantify impact in percentage points, and present the results in Monthly Business Reviews (MBRs) and to CXOs. I also use GenAI tools to automate manual workflows: my fraud order cancellation automation, built in Python with Claude Code, has cancelled ~₹3.5 Cr of high-risk orders in 4 months. PGDM in Operations & Business Analytics, ranked 3rd in my batch.

Experience

AJIO, Reliance Retail Ltd. — Assistant Manager, Project Management (Management Trainee) · Jul 2024 – Present

Returns analytics & RCA

- Own the weekly return KPI review (RTO + RVP). Built a 14-day maturity-lagged driver framework in Databricks SQL and Python that breaks down return movement by business unit, brand, pincode, COD/non-COD and return reason for MBR and CXO reviews.
- Broke down the gap between June returns (31.4%) and the plan target (26.17%) into controllable operational drivers, quantified in percentage points (pp): virtual RTO +0.44 pp, ageing pendency +0.18 pp, whitelist effects +0.10 pp.
- Diagnosed a brand RTO spike from 19% to 38% in one month and traced +13 pp of it to 4 product options with surging COD orders. Those options were blocked.

Fraud & COD risk

- Identified newly emerging high-fraud pincodes (about 100% COD, 99% RTO) behind +2.0 pp of a +2.4 pp monthly rise in platform RTO, and recommended targeted COD blocks sized by revenue share and expected pp impact.

- Co-designed a fraud-log data mart (Kafka source) that shows which Fraud Engine rule applied to a customer at the time of each order. Flagged upstream data-quality gaps that could wrongly block genuine customers.

Process automation

- Extended and rebuilt the downstream Python automation (pandas, APIs, scheduler) using Claude Code (GenAI-assisted development) for cancelling high-velocity fraud orders, running every 3 hours since Jun 2026. It has processed 2,500+ orders and 14,000+ line items across 200+ runs and cancelled ~₹3.5 Cr of high-risk orders.
- Built a monitoring dashboard with 20+ KPIs (approval rate, MTTA, P95 turnaround). Migrated return dashboards to Databricks and automated recurring weekly reporting.

Customer insights & catalog

- Led a customer research project on returns (Qualtrics survey with 309 responses, plus focus groups). It found that 45% of customers received a different fit despite 90% checking the size chart. This led to a PDP measuring guide, inward sizing & fit QC and a brand-ratings datamart.
- Run the monthly delisting of high-return options (over 60% RVP), monthly return forecasts and returns MBR decks, working with Product, Tech, Catalog, Customer Care and Fraud teams.

Writer Business Services Pvt. Ltd. (Writer Safeguard), Mumbai — Summer Intern, Service Assurance (Report Operations) · May 2023 – Jul 2023

- Mapped the as-is discrepancy resolution and daily client reporting process for bank clients of a cash logistics company. Identified 8 manual, error-prone steps, including repeated file downloads, manual checks and hand-drafted emails.
- Designed the to-be process: automated discrepancy checks, auto-alerts and escalation emails to locations, a one-click report generation portal, and a monitoring dashboard for report status and open discrepancies.
- Presented the portal design and process flows to senior management. Nominated for the Best Summer Internship Award and received a Letter of Recommendation.

Education

Universal Business School, Mumbai — PGDM, Operations & Supply Chain (Major), Business Analytics (Minor) · 2022 – 2024

- **Ranked 3rd in batch (academics)** · CGPA 6.7/9

Amity University, Noida — B.Tech, Biotechnology · 2017 – 2021 · 81.8%

Skills & Certifications

- **Analytics & tools:** SQL (Databricks), Python (pandas, requests, scheduling), GenAI tools (Claude Code for automation development, AI-assisted SQL), Tableau, Power BI, Excel, Google Sheets
- **Business:** Root cause analysis, KPI design, returns/RTO analytics, fraud & COD risk rules, process mapping (Draw.io, Lucidchart), MBR/CXO storytelling
- **Research & workflow:** Qualtrics surveys, Asana, Zoho
- **Certification:** Lean Six Sigma Green Belt (in progress, 2026)

Projects & Achievements

- **Rajasthan Patrika (industry project, Feb 2023):** Proposed a third-party logistics pilot and a dynamic weekly delivery schedule to improve delivery timelines and reduce driver absenteeism. Received a Letter of Recommendation.
- **SMART Project Head**, Universal Business School (Societal Causes Management and Responsibility Training)
- Runner-up, table tennis, UBS Sports Club Olympics
